Brian, just an FYI, for some reason two different chemicals were identified between the incident information (magnesium) and materials involved (chromium) rows (page 9 of the pdf) regarding the explosion at USEI.

**Subject:** 2018 Incident Summary

Dear Colleagues,

Attached, please find our 2018 incident tracking summary and cover memo. This marks the second year where we have collected and summarized incident reports from permitted TSDs and PCB handling facilities. The purpose of this effort is to take advantage of the reporting that occurs when a facility's contingency plan triggers the submission of an incident report. It is our hope that by looking collectively at this reporting we can better understand what leads to incidents and perhaps share this information with the idea of ultimately changing practices and improving the handling of hazardous and PCB containing wastes.

We appreciate the help of the regions in collecting this information as this report would not be possible without your efforts to work alongside your states and encourage the submission of these reports. While we are now focused on collecting incident reports for 2019, if for any reason you identify additional reports from 2016 to the present that have not yet been sent into [ORCRIncidentTracking@epa.gov](mailto:ORCRIncidentTracking@epa.gov) please do so as the more complete our inventory is the better our national characterization we will be.

Sincerely,

**Barnes Johnson**
